

**MATH 10B – Spring 2019**  
**Quiz 5 – Prepared by John Yirong Zhen**  
**Date: 02/26/2018**

You are to finish this quiz in 10 minutes. You are allowed one single-sided letter-size cheat sheet. No calculators or other notes/books/devices are allowed.

Your cheatsheet must be handwritten by you, no photocopying or preprinted (unless you have written permission from the instructor). Try your best! Stay calm and good luck!

**I. True/False (2 pts)**

Circle T or F in the space provided in front of the statement to indicate whether it is true or false respectively. You get +1 for a correct answer, -1 for incorrect, and 0 for leaving it blank. (You should not guess if you don't know the answer.)

You do not need to justify your answers for T/F statements.

- ① F  $P(A \cap B) \geq P(A) + P(B) - 1$   
 $P(A \cap B) \geq P(A) + P(B) - 1$  is equivalent to  $1 \geq P(A) + P(B) - P(A \cap B)$ , which is in turn equivalent to  $1 \geq P(A \cup B)$ , which is true.
- ① F If  $B \subset A$ ,  $P(A|B) = 1$ .  
If  $B \subset A$ ,  $P(A \cap B) = P(B)$ . Then,  $P(A|B) = \frac{P(A \cap B)}{P(B)} = \frac{P(B)}{P(B)} = 1$ .

**II. Written problems (10pts)**

- You MUST **justify your answer** to undoubtably convince me that you solved and not guessed it. Partial credit will be given to good work and progress even if there is no final answer or the answer is incorrect. On the other hand, bogus justification for a correct answer will receive a 0.
- Keep your scratch work separate. Cross out writing you don't want to be graded and clearly label the parts you want to be graded.
- Points will be deducted for incorrect writings that you "forget to cross out."

See problem on back.

Suppose that 20% of the population is taking a certain drug, and 20% of them suffer from migraines as a side effect. Supposing that the rate of migraines in the general population is 10%, what is the probability that a migraine sufferer is taking the drug?

Let  $A$  be the event that the person is taking the drug.

Let  $B$  be the event that the person has migraines.

$$P(A|B) = P(A \cap B)/P(B) = P(B|A)P(A)/P(B) = (0.2 * 0.2)/(0.1) = 0.4$$
